Master Measuring Length in Mixed Measures (cm and mm) A

Our practical task cards for Master Measuring Length in Mixed Measures (cm and mm) can be given to pupils to assess their ability to measure the lengths and heights of given items using mixed measurements.

This guidance should be used in conjunction with the task cards.

Preparation of Tasks

Pupils will need access to rulers to complete the tasks. The tasks which require pre-measured items are detailed below.

Task 1

Measure lengths of various pieces of ribbon to different mixed measures in cm and mm. We would recommend preparing a good variety of measurements for the children. For example, 7cm and 3mm, 10cm and 5mm, and 24cm and 9mm.

Task 2

Find items that can have mixed measurements in cm and mm to place around the classroom. Again, we would recommend finding a broad variety of lengths for the children to practice measuring.

Task 3

Find items of varying heights that you can estimate and measure the height of safely in and out of your classroom using a ruler.
